

ValenceOps – Current State (as of Sep 2026)

Internal reference doc. Purpose: a single source of context that can be fed into legal drafting, client-facing docs, or any other downstream use.

1. What ValenceOps Is

ValenceOps is a post-lead revenue operations agency for clinics. The scope of the work sits entirely in the conversion gap – everything that happens after a lead enters a clinic and before that lead becomes a paying patient.

The agency does not do lead generation, paid ads, website design, or content/marketing. When a clinic's need is "more leads," that's outside scope.

2. Vertical

- Aesthetic clinics – skin, hair, dermatology, cosmetology, and adjacent cosmetic/aesthetic-medicine practices.

- IVF is explicitly excluded.

3. Team

Name	Role	Responsibilities
Tilak	CEO	Outreach, calls, meets, proposals, mystery shops, one-page docs, legal setup
Pratham	COO	Outreach, calls, meets, mystery shops, one-page docs, legal setup, finance
Adithya	CAIO	Workflows, AI automations
Madhava	CTO	Data, Supabase, reporting

Tilak and Pratham jointly cover business-development activity (outreach, calls, client meetings, mystery shops, one-page docs) and legal/registration setup. Madhava and Adithya handle the technical build – data/infra and workflow/automation respectively.

4. Systems (all live and ready)

ValenceOps runs on a set of independent systems, each built and deployed per client based on what that clinic actually needs – not a single fixed all-in-one product. The systems:

1. **Speed to lead** — first-response automation on inbound enquiries
2. **Lead qualification** — structured intake/qualification flow
3. **Booking** — appointment scheduling and confirmation
4. **No-show (prevention + recovery)** — reminders and post-miss recovery sequences
5. **Quote and follow-up** — structured follow-up on sent quotes/treatment plans
6. **Review** — post-consultation review requests
7. **Dead pipeline (reactivation)** — one system among the seven, not the flagship/primary offering

Voice agents — currently handle **inbound calls only**.

Every clinic runs a different CRM, and most clients don't need the full end-to-end stack. Systems and workflows are designed and customized per client rather than deployed as a standardized package.

5. Tech Stack & Cost Structure

Fixed costs (agency's own account/name):

- Hostinger
- Supabase

Variable costs (billed on the client's card):

- Sarvam
- Meta
- Exotel / Plivo

6. Compliance

- DPDP Act compliance is followed.

7. Pricing

Pricing is customized per client — not a generalized, fixed package.

- Setup: ₹65,000 – ₹1,00,000
- Monthly retainer: ₹25,000 – ₹45,000

(No standing commentary on current client count/roster is included in this doc.)

8. Legal & Business Registration

- **Legal name:** Valence Ops
- **Structure:** Sole proprietorship
- **Proprietor:** S Tilak
- **Udyam registration:** UDYAM-KR-03-0707297
- **Shops & Establishments registration:**
25/37/CE/0063/2026

- **Registered office:** #35/2, JK Nilaya, 2nd Floor, Railway Station Rd, Near Rama Mandira, Yeshwanthpura, Bengaluru, 560022
- **Current account:** IDFC First Bank (Gold)
- **GST:** Not registered — deliberate decision (not a pending/delayed process)

9. Outreach & Business Development

Outbound has been running since mid-July 2026, targeting Bangalore-based aesthetic clinics. The approach evolved over the course of the project:

- **Early phase:** heavy upfront research (deep clinic dossiers, ICP scoring) before any outreach — this generated no sends and was corrected once identified as the bottleneck.
- **Refined process:** mystery-shopping each clinic (testing their own enquiry response) to surface a real, verifiable gap before drafting outreach, combined with a tiered qualification system (live paid demand, high review volume with no ads, Instagram-only signals) to prioritize which clinics to approach and in what order.
- **Research base:** 120+ clinics across Bangalore have been researched to date.
- **Standing rules established along the way:** message sequencing limits, published-hours-only

evidence, one message per clinic (not per contact), and a touch-count/time tripwire that forces a strategy review if outreach volume passes a threshold without results.

Current pipeline status (condensed):

- Several clinics are at active proposal or intake-form stage, following discovery calls/meetings held with clinic decision-makers (in-person and online) — notably SkinFit, RUA Skin & Hair Center, and Aurilueur Esthetic Clinic. Responses are pending on most of these.
- A couple of earlier warm replies (Sapphire Skin & Aesthetics, Aesthetica Veda) remain open but haven't been actively worked since the initial reply.
- A larger qualified cohort (~30 additional clinics) has been researched and mystery-shopped but not yet moved into active outreach.
- No signed contract or formal pilot agreement exists yet for any clinic.

Note: this doc intentionally omits revenue-recovered figures/claims — keep those out of any derivative docs unless explicitly requested.
