

PREPARED FOR

DNA Skin Clinic

Six people on the phones. Patients still calling twice.

A read on what's publicly visible about DNA Skin Clinic — the reviews, the demand, and something Dr. Priyanka has said herself. It says less about how hard the team works, and more about what each of them starts from.

OBSERVED — PUBLICLY VISIBLE SIGNALS

THE REVIEWS	Patients repeatedly mention needing multiple calls to reach the
PATIENTS, IN THEIR WORDS	clinic, difficulty getting an appointment, and rescheduling — alongside consistent praise for the doctors and results.
THE TEAM	A six-person telecalling team already handles this — a serious
ALREADY IN PLACE	investment most clinics this size haven't made.
THE FOUNDER	Dr. Priyanka has spoken about building a system to handle the demand
SAID PUBLICLY	— so none of this is news inside the clinic.

Nothing here came from inside the clinic — only what's visible from outside, and the founder's own words.

Six people on the phones isn't the gap — it's already more capacity than most clinics have. The gap is that all six start every call from zero: nothing has established what the patient wants, which branch, or how urgent, before someone picks up. Adding callers adds calls. It doesn't reduce the number a patient has to make.

WHY THIS MATTERS

Between roughly 1.5 million followers on Dr. Priyanka's account, 31,000 on the clinic's, five active Meta ads and live Google ads, demand isn't what needs fixing here. The reviews describe what happens after it arrives: patients calling more than once to get through, appointments hard to lock in, Dr. Priyanka herself hard to reach because so many people want her. That's not a service problem — every review says the opposite about the care. It's what a queue looks like when every enquiry arrives unsorted, and six people do that sorting one conversation at a time.

CONFIRMED FROM OUTSIDE

- ✓ Around five active Meta ads plus live Google Search ads run across skin, hair, and aesthetic procedures — on top of roughly 1.5M followers on the founder's account and 31K+ on the clinic's.
- ✓ Reviews repeatedly mention difficulty booking, needing multiple calls to reach the clinic, rescheduling, and difficulty accessing Dr. Priyanka because of demand — alongside strong praise for the doctors and results.
- ✓ A six-person telecalling team is already handling enquiry and appointment volume, and Dr. Priyanka has publicly spoken about building a system to manage the demand.

CAN'T CONFIRM WITHOUT YOUR DATA

- How many enquiries each of the six handles in a day, and how much of that time goes to establishing what the patient wants before anything else can happen.
- How many enquiries from the last few months were never closed out — the ones that asked once, didn't get through, and quietly stopped trying.

WHAT WE'D CHECK FIRST, IF WE HAD ACCESS

- What share of the team's day goes to the first two minutes of a call — treatment, branch, urgency — that could be established before the phone rings.
- How large the backlog of past enquiries actually is, and how many of those people are still reachable and still interested.

What we're not saying: this isn't about the telecalling team being too slow or too small — six people is real investment, and the reviews make clear the care isn't in question. It's not about needing more patients either; that's the one thing DNA doesn't need. This is only about what each of those six starts from when the call begins.

This isn't unique to DNA — it's what happens when a founder builds more demand than any manual process was designed to absorb, and the fix is a system, not more headcount. Dr. Priyanka has already said as much. The real question is which part to build first: the layer that sorts new enquiries before they reach the team, or the backlog of people who asked once and never got through.

A full audit — mapping both, and showing which one is worth more this quarter — takes about 30 minutes, **at no cost to the clinic.**
