

SCOPE OF WORK

RUA Skin & Hair Center

What we'll build, in what order, once the audit confirms how enquiries actually route across both branches.

01

Engagement Overview

This Scope of Work sets out what ValenceOps would build for RUA Skin & Hair Center, and how, following our call and the enquiry-routing audit proposed on it. It should be read together with the signed Quotation referenced above, which governs pricing and payment.

Delivery happens in two parts: a one-time setup for each system, and an ongoing Monthly Operations Retainer once a system is live. Systems are presented below one at a time; the order they're actually switched on is agreed together, not fixed by this document.

A separate Services Agreement, covering liability, medical disclaimer, intellectual property, and confidentiality, will be issued alongside this SOW prior to execution.

02

Messaging Infrastructure

Shared foundation that the systems in Section 03 run on, covering every channel an enquiry can currently arrive on.

- WhatsApp Cloud API, set up and used directly by ValenceOps on the Client's behalf (self-managed, not via a third-party Business Solution Provider)
- Messenger, covering the Meta ad chats the clinic's advertising already opens
- Instagram DM
- Meta in-platform lead forms
- Website enquiry form
- Automation platform built to run all in-scope systems across the above channels, with replies routed to the correct coordinator
- Message sequences built in English; vernacular language support (e.g. Kannada) is optional and will not be built until separately confirmed by the Client

Phone calls are a separate channel, handled directly by the front desk rather than automated. See Client Responsibilities.

03

Systems in Scope

Each system below is presented with what's delivered at setup, and what continues under the ongoing retainer. Sequencing across systems is agreed together; see Section 01.

01

AI Lead Qualification Bot

Responds to new enquiries instantly and runs a structured qualification flow, handing a clear summary to the sales team.

SETUP

- Instant-response flow configured across all channels in Section 02
- Structured qualification flow built: requirement, service, budget range, availability, urgency
- AI-driven handling configured for general questions while the patient waits for a rep
- Lead summary format built for handoff to the sales team, with full context preserved
- Does not provide medical or clinical advice; questions about diagnosis, treatment suitability, or medical concerns are escalated to a human team member

ONGOING (RETAINER)

- Qualification flow and questions updated as services or offers change
- Ongoing monitoring of response quality and handoff accuracy

02

Booking System

Optional CRM/calendar write-integration, depending on what the Client's system supports (see Assumptions & Re-Scope)

Turns the outcome of a qualified enquiry into a held appointment instead of a callback promise.

SETUP

- When a patient is ready to book, the request is sent directly into the Client's CRM and calendar
- Where the CRM supports it, the slot is booked directly; otherwise it is submitted as a requested slot
- A rep confirms every booking with the patient before it is treated as final, regardless of path
- Ad-click-to-booking attribution included, connecting a booked consultation back to the ad or channel it originated from

ONGOING (RETAINER)

- Booking flow adjusted as the CRM/calendar setup is confirmed
- Ongoing monitoring of booking completion rates

03

No-Show Recovery System

Reduces missed appointments and recovers patients who don't attend a scheduled consultation or visit.

SETUP

- Pre-appointment confirmation and reminder sequence built
- Self-serve reschedule and assistance options configured
- Automated no-show detection and same-day recovery sequence built
- Rebooking flow into an available slot configured

ONGOING (RETAINER)

- Recovery sequence maintained and refined over time
- Ongoing monitoring of reminder and recovery performance

04

Quote Follow-Up System

Sequenced after 01–03 are live, exact timing to be agreed

Makes sure every patient who receives a quotation or treatment plan gets consistent follow-up.

SETUP

- Staged follow-up reminder sequence built for quotes/treatment plans
- Personalised messaging templates configured per quote type
- Response tracking across the follow-up window
- Escalation-to-sales trigger configured for when interest is shown

ONGOING (RETAINER)

- Follow-up sequence maintained and refined as pricing or offers change
- Ongoing monitoring of follow-up performance

05

Review Generation & Reputation Management

Sequenced after 01–03 are live, exact timing to be agreed

Generates genuine reviews at the right point in the patient journey.

SETUP

- Automated review-request sequence built, timed after a successful consultation or completed procedure
- Follow-up reminder sequence configured
- Response tracking across platforms
- Alert flow configured for feedback that needs the team's attention

ONGOING (RETAINER)

- Review-request timing and messaging refined over time
- Ongoing monitoring of review activity across platforms

06

Dead Lead Enquiry Reactivation

Optional · not included unless separately confirmed; scope to be sized during the audit

Reaches back out to enquiries that went cold without a proper follow-up, and hands any live interest back to the sales team.

SETUP

- Existing cold enquiries reviewed and a reactivation sequence built
- Live interest handed back to the sales team with full context
- Scope (one-time cleanup of the existing backlog, an ongoing safeguard, or both) confirmed separately before build begins

ONGOING (RETAINER)

- Ongoing safeguard against future leads going cold, if opted into

04

Data & Trust

How we'd set this up safely, in brief.

- 01 **Patient records stay where they are.** We work on incoming messages, not medical records. The Client's patient system stays the Client's.
- 02 **Nothing automated ever gives medical advice.** It captures what someone is asking and routes it to the Client's team. It never answers clinical questions or speaks in a doctor's name.
- 03 **Only people who contacted the Client first are messaged,** within what WhatsApp and Meta permit. No purchased lists, nothing that puts the Client's number at risk.
- 04 **Every message is logged and readable by the Client.** Nothing goes out unseen.
- 05 **Access and data stay the Client's.** The Client grants access and can withdraw it at any time; ValenceOps never takes a copy of patient data elsewhere.
- 06 **Only what's needed is captured.** Name, phone number, and enquiry details are captured only as needed to respond to and route an enquiry; nothing is retained beyond what keeps the automation running, and no data is stored outside the Client's own systems.
- 07 **WhatsApp opt-out is built in.** Patients can stop communication at any point; opt-outs are honoured and excluded from further outreach.

05

Assumptions & Re-Scope

This SOW is written before the audit has run. The following are open items, confirmed during setup rather than assumed now:

- Which practice management or booking system RUA uses today, and whether it supports direct calendar writes or only requested slots
- Whether Ramamurthy Nagar and Indiranagar route into one unified inbox or stay separate
- Whether each branch's WhatsApp number runs on the Business app or the Cloud API
- Exact enquiry volume across both branches, to be sized during the audit

If any assumption above turns out to be materially different once confirmed, for example the CRM cannot support the direct integrations described, **scope, timeline, and/or pricing for the affected system will be revisited together before work proceeds on it.**

06

Timeline

PHASE	DESCRIPTION	DURATION
WhatsApp / Messaging API Setup	Meta account setup, phone number registration, and message template submission/approval.	Approx. 5–7 business days
System Build, Testing & Go-Live	Each in-scope system configured against RUA's services and messaging style, tested, and taken live.	Approx. 7–10 business days, following API setup
Retainer Term Start	Monthly Operations Retainer begins once a system's go-live is complete.	—

Timelines are approximate, per system, and begin once Client access (WhatsApp Business Manager, and CRM/calendar where relevant) is provided. Delays in providing access will shift the above dates.

07

Client Responsibilities

- Provide and maintain admin access to the Client's CRM/patient management system, calendar, and WhatsApp Business Manager
- Review and approve message scripts where customisation is requested; message content is customisable to the Client's specific needs
- Phone enquiries are handled directly by the Client's front desk team; call outcomes (booked, follow-up needed, not interested, etc.) must be logged manually in the CRM by front desk staff, since calls are not part of the automated systems in Section 03
- Ensure front desk/sales staff manually update records for any other activity not captured by automation (e.g. walk-ins, verbal confirmations, offline notes)
- Respond to ValenceOps requests for approvals, information, or access in a timely manner so as not to delay setup or ongoing delivery
- Avoid running parallel or conflicting automation/messaging tools on the same WhatsApp number without informing ValenceOps
- Confirm scope for the optional Dead Lead Enquiry Reactivation system, and any vernacular language requirement, before either is built
- Confirm the preferred branch-routing setup (unified vs. per-branch inboxes) before the Qualification and Booking systems are built

08

Exclusions

This engagement does not include:

- Paid advertising spend or ad campaign management (Meta Ads, Google Ads, etc.)
- Content creation (ad creatives, marketing collateral, website/landing pages)
- Automation of phone/voice calls (call answering, transcription, or CRM logging of calls); calls remain handled directly by the front desk, per Client Responsibilities
- Sales training or staff coaching
- Third-party platform subscription costs not already covered under the signed Quotation

09

Term, Renewal & Termination

- Monthly Operations Retainer runs on a month-to-month basis with a _____-month minimum commitment
- The engagement auto-renews at the end of each term unless cancelled by either party
- Cancellation requires _____ days' written notice

10

Pricing

Pricing and payment terms for this engagement are set out in the referenced Quotation and are not restated here. In the event of any conflict between this SOW and the Quotation on pricing, **the Quotation governs.**
