

PREPARED FOR

SkinFit Wellness

Someone answers in seconds. Nothing they hear gets written down.

We sent a WhatsApp enquiry about hair treatment to SkinFit Wellness’ own listed number, to see what happens between a first message and a booked consultation.

OBSERVED – WHATSAPP ENQUIRY, HAIR TREATMENT

MESSAGE 1 A message went to the clinic’s listed WhatsApp number asking about hair treatments. A person replied straight away – no delay, no bot standing in for a human.

ENQUIRY SENT
THEN THE DETAILS WERE ASKED FOR IN WRITING
SAME THREAD The answer was that typing it all out was difficult, and the conversation was pushed to a phone call later. The hair concern behind the enquiry was never asked about, and nothing about it was recorded in the chat.
MOVED TO A CALL

This was a real WhatsApp enquiry sent to SkinFit Wellness’ own listed number – not a guess.

Speed isn’t the problem – someone answered immediately. What the test shows is that everything the patient said stops at that chat window: whoever takes the call starts from zero, and where the call never connects, there is no record anywhere that the person asked, or what they asked about.

WHY THIS MATTERS

With no campaigns running, every WhatsApp enquiry arriving today found the clinic on its own – nobody paid for it, and no budget will simply produce another one. When the answer to a treatment question is “let’s speak on a call,” the enquiry stops being a conversation and becomes a scheduling problem. The ones that reach the call get a proper consultation. The ones that don’t leave nothing behind – no concern noted, no follow-up owed, no trace that anyone ever asked.

CONFIRMED FROM OUTSIDE

- ✓ A WhatsApp enquiry about hair treatments was answered immediately by a person, not an automated greeting.
- ✓ When details were asked for over text, the conversation was moved to a later phone call and the hair concern was never captured.
- ✓ No paid campaigns are running on Meta or Google, and the clinic holds 4.9 stars across 120 public reviews.

CAN'T CONFIRM WITHOUT YOUR DATA

- Whether the promised call actually happens for enquiries handled this way, or how many go cold before anyone dials.
- Whether what a patient says on WhatsApp is written down anywhere afterwards, or lives only inside that thread.

WHAT WE'D CHECK FIRST, IF WE HAD ACCESS

- How many enquiries in a normal week end at “let’s speak on a call,” and how many of those calls connect.
- Whether two or three questions inside the chat – what the concern is, how long it’s been going on, what’s been tried – would let the call start warm instead of from zero.

What we're not saying: this is not a comment on whoever answers that WhatsApp – they replied instantly, which most clinics don’t, and typing out treatment details to every stranger genuinely is slow work. It’s also not a suggestion that a bot should discuss someone’s hair loss with them. It’s only about whether what a patient tells you before the call should survive the chat window, instead of disappearing along with the ones who never picked up.

This isn’t unique to SkinFit Wellness – it’s one of the most common patterns we see in founder-led skin and hair clinics where one person handles the chat personally. The real question isn’t whether this one enquiry would have booked; it’s how many people typed out a hair concern this month, got a call slot back instead of an answer, and left nothing behind that anyone could follow up on.

A full audit – mapping what happens to a WhatsApp enquiry between the first message and a confirmed consultation – takes about 30 minutes, **at no cost to the clinic.**
