

PREPARED FOR

Venkat Center for Aesthetic Health

The welcome message arrives. Nothing tracks what happens after.

We tested Venkat Center's Instagram and WhatsApp last week. What we found says less about one welcome message, and more about whether anything downstream of it is actually being tracked.

OBSERVED – INSTAGRAM & WHATSAPP ENQUIRY FLOW

INSTANT

INSTAGRAM, AUTOMATED

The Instagram enquiry got an immediate automated reply, asking for contact details and sharing the clinic's WhatsApp number.

ROUTED TO WHATSAPP NEXT

+65 MIN

WhatsApp, AUTOMATED

The WhatsApp message sent at 10:25 AM got an automated welcome about 65 minutes later.

NO HUMAN FOLLOW-UP AFTER THE WELCOME

UNANSWERED

NO HUMAN REPLY

Nothing followed the automated welcome — no person picked the conversation up from there.

These were real messages sent to the clinic's own Instagram and WhatsApp, not a guess.

Instagram replies instantly and routes to WhatsApp; WhatsApp answers in 65 minutes with a welcome message — then nothing. The automation covers the first hello, not what happens after it, and that's the same shape reviews already describe on the other side of a booking: a patient arrives, and there's no record anyone was tracking them at all.

WHY THIS MATTERS

Venkat Center has been a family-run institution since 2003, now spanning three locations — Banashankari, Vijayanagar, and Cunningham Road. That's exactly the kind of trusted, multi-decade name where a new patient's first real signal isn't the welcome message, it's whether the visit itself goes the way the welcome message implied it would. A welcome that arrives and then goes quiet doesn't lose the patient on the spot — it loses them at the front desk, on the day, when there's no record of why they're standing there.

CONFIRMED FROM OUTSIDE

- ✓ Instagram's auto-reply is instant, asking for contact details and pointing the enquiry to WhatsApp.
- ✓ WhatsApp's automated welcome took about 65 minutes to arrive, and no human followed up after that in this test.
- ✓ Reviews repeatedly describe patients arriving for appointments the front desk has no record of, alongside near-identical templated replies to the negative ones.

CAN'T CONFIRM WITHOUT YOUR DATA

- Whether the automated welcome is the last step every time, or whether some enquiries do get a human follow-up this single test didn't happen to catch.
- Whether the enquiries that go quiet after the welcome are the same appointments later showing up unlogged at the front desk.

WHAT WE'D CHECK FIRST, IF WE HAD ACCESS

- How many Instagram and WhatsApp enquiries get only the automated welcome versus an actual human reply, across all three locations.
- Whether the same handoff gap between "automated welcome" and "human confirms" is what's producing the missing appointment records reviews describe.

What we're not saying: the Instagram auto-reply is a genuinely good setup — most clinics don't have anything that fast. This isn't about the front desk not caring or being careless. This is only about whether anything is tracking what happens between the automated welcome and the appointment actually being logged.

This isn't unique to Venkat Center — many clinics build the first-touch automation and stop there, because the welcome message already feels like the job done. The real question isn't whether the welcome went out; it's whether anything downstream of it is being tracked at all, across three locations and a name that's been trusted since 2003.

A full audit — mapping exactly where the handoff between the automated welcome and a confirmed booking breaks down — takes about 30 minutes, **at no cost to the clinic.**
