

PREPARED FOR

Vtiara Hair & Skin Clinic

Every enquiry gets a reply. Not every enquiry gets sorted.

We tested Vtiara's WhatsApp last week. What we found says less about how fast someone replied, and more about what happens the moment after — before a hair transplant enquiry and a skin consult get treated the same way.

OBSERVED — WHATSAPP ENQUIRY

- 5:14 PM

A WhatsApp message was sent asking a simple question — "hello."

ENQUIRY SENT
- 5:31 PM

A person replied: "Vtiara hair and skin clinic. How can I help you?"

HUMAN REPLY, 17 MIN LATER — the same opening every enquiry gets, whether it's about a hair transplant or a skin consult.

This was a real message sent to the clinic's own WhatsApp number — not a guess.

17 minutes is a reasonable reply time — that's not the gap. The gap is what happens right after "how can I help you?": someone still has to work out, by hand, whether this is a hair transplant enquiry or a skin consult, which of three branches, and which doctor — every single time.

WHY THIS MATTERS

Vtiara runs 19 active ads across Google and Meta, promoting hair transplant, pigmentation, skin lightening, hair loss, and laser treatments — categories that don't share a first question. Hair transplant is also the most heavily comparison-shopped treatment in this category: most people asking about it are checking two or three clinics before deciding, so how clearly that first sort happens matters more here than almost anywhere else. Right now, that sort still happens by hand, every time, across three branches — and Vtiara is currently hiring a Client Co-ordinator for the Indiranagar branch, with "handle client queries," "coordinate with doctors," and "ensure smooth front desk operations" listed as the role's core responsibilities. Whatever isn't sorted before that hire starts becomes their entire first week.

CONFIRMED FROM OUTSIDE

- ✓ 19 active ads (Google + Meta) are running across hair transplant, pigmentation, skin lightening, hair loss, and laser treatments, spanning three branches.
- ✓ A WhatsApp enquiry received a human reply in 17 minutes — real monitoring, no automation, and the same opening question regardless of what the enquiry was about.
- ✓ Vtiara is actively hiring a Client Co-ordinator for the Indiranagar branch, with the listing naming client queries, doctor coordination, and front-desk operations as the core responsibilities.
- ✓ Reviews repeatedly mention waiting time and staff coordination, alongside strong trust in the doctors and treatment results.

CAN'T CONFIRM WITHOUT YOUR DATA

- Whether enquiry sorting happens consistently across all three branches, or varies by location.
- Whether the new coordinator inherits a documented process for this, or starts building one from scratch while also doing the job.

WHAT WE'D CHECK FIRST, IF WE HAD ACCESS

- How many WhatsApp enquiries come in per week across all three branches, and how many are hair transplant, skin, or just price-checking.
- Whether a short set of questions upfront — treatment type, branch, urgency — could hand the coordinator an already-sorted enquiry instead of a raw one.

What we're not saying: this isn't about WhatsApp being slow — 17 minutes, from a real person, is a reasonable reply. It's not about the hiring decision being wrong either — a dedicated coordinator is a good call. This is only about whether that person walks into a system that already sorts enquiries, or one that expects them to build it from scratch while also doing the job.

This isn't unique to Vtiara — most growing clinics reach the point where the front desk needs a dedicated person before they reach the point where that person's job is actually well-defined. The real question isn't whether the new coordinator can handle the queries; it's whether they spend their first weeks sorting hair-transplant-from-skin enquiries by hand, or coordinating with doctors and closing the ones already sorted for them.

A full audit — mapping exactly how enquiries could be sorted before they reach the front desk — takes about 30 minutes, **at no cost to the clinic**, ideally before the new hire's first day.
